

## **Contract Health System, V 3.1 Patch 5**

### **EXECUTIVE SUMMARY**

The Contract Health System (CHS) provides an effective and reliable means by which eligibility for paid health care is determined. Contract Health System tracks, stores, and reports clinical and cost data on patient referrals to in-house clinics, other IHS facilities, and contract health providers.

Patch 5 of version 3.1 of the Contract Health System package addresses issues related to recent HIPAA Title II requirements. To meet these requirements, this patch implements the X12 transaction set 278 for HIPAA transaction set compliance.

Patch 5 also contains a number of non-HIPAA related fixes and modifications. Please refer to the patch 5 notes file for a complete list of changes.
